Ibb Governorate

A. Summary

In Ibb Governorate, there are 95 communities with a total population of 73,922 people who are impacted by landmine/UXO contamination. No fewer than 55 of the affected communities are located in Al-Nadera district. A total of 165 mined areas with a reported surface area of 75 million square meters have been identified. Of the 75 million square meters of affected land, 74.5 million square meters is reported to be hillside, ridge, or gully overgrown, at least in part, with short and tall grass, bushes, and/or trees. The survey also recorded 14 recent¹ and 876 less-recent² mine victims in the affected communities.

B. Location

Ibb Governorate is located in the central part of the country, with an area of 5,344 square kilometers and a population of approximately 1,665,000³.

C. Scope and history of the landmine contamination

Of the 18 districts in Ibb, 10 are affected by landmines/UXO. Levels of contamination vary from district to district. The landmine-affected districts include Al-Makhader, Al-Nadera, Al-Odain, Al-Oafr, Al-Radhma, Al-Saddah, Al-Sebrah, Al-She'ar, Ba'dan, and Yareem. No landmine/UXO contamination has been reported in the remaining eight districts.

Of the 1,560 communities in the 10 affected districts, 95 reported landmine/UXO impacts. In those 95 communities, 165 mined areas are reportedly blocking access to an estimated 75 million square meters of land. The landmine problem in Ibb is primarily concentrated in Al-Nadera district and affects 55 communities. The survey information confirms that landmine/UXO contamination in Ibb occurred between the years 1979 and 1985.

D. Impact upon communities

Landmine/UXO contamination affects 95 communities with a total population of 73,922. The communities affected consist of 52 compact viilages, 42 dispersed villages, and one suburban village. As per the survey scoring mechanism, one community suffers a high level of impact, 13 a medium level and 81 a low level.

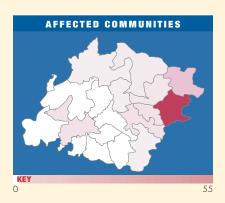

In the majority of affected communities, landmine/UXO contamination is blocking access to pasture and agricultural land. As many as 90 communities

E. Implications for mine action

Landmines in Ibb exist primarily along access routes to points of strategic importance, and around former military positions used during the years 1979 to 1985. Landmines or UXO contaminates an estimated total surface area of 75 million square meters. Of this, 74.5 million square meters is hill-side, ridge, or gully overgrown, at least in part, with short and tall grasses, bushes, and/or trees.

A majority of the mined areas are reported to contain AP mines, though some have a combination of AP, AT, and/or UXO, and some only AT mines.
